ABSTRACT

Electronics majors from vocational/technical schools and comprehensive curricula high schools frequently find themselves repeating the same experiences and courses, and working with the same instructional materials when they enroll in college electronics programs. In order to minimize this needless repetition and address the problem of articulation between such schools and the Catonsville Community College, a week-long workshop was convened during August 1977. Representatives from three vocational/technical schools, two comprehensive high schools, and the college participated in the workshop to develop a proposal for an integrated curriculum. Participants agreed upon and met seven objectives: examine each institution's course objectives and learning sequences; compare objectives and learning experiences from all institutions; recommend changes to obtain uniformity; develop an articulation agreement; develop implementation procedures; provide for followup and evaluation procedures; and devise an articulation credit examination for articulated courses. Appendices cover course outlines, objectives, and examinations for two college beginning electronics courses and for high school introductory and advanced electronics. (TR)

# FINAL REPORT

# ELECTRONICS ARTICULATION WORKSHOP

Catonsville Community College
and
Baltimore County High Schools and
Vocational Technical Schools

August 15-19, 1977

JC 780 405

The funds for this workshop were provided by a grant from the State Board for Community Colleges. The Director of the Workshop was Joseph A. Scarlett, Director of Career Programs, and the Chairperson for the Workshop was William L. Roberts, Assistant Professor, Electronics Technology, Catonsville Community College.

August 19, 1977

The Workshop to develop an Electronics Articulation Agreement between Baltimore County Comprehensive High Schools, Vocational-Technical Schools, and the Catonsville Community College has agreed upon and recommends the implementation of the following policies and procedures contained in the appended report.

WORKSHOP PARTICIPANTS

# INTRODUCTION

Students completing curricula in comprehensive high schools and Vocational-Technical Schools often repeat the same related materials, experiences, and courses in college. In order to minimize this needless repetition and to address the problem of articulation between comprehensive high schools, Vocational-Technical Schools and the Catonsville Community College, this workshop was convened for the week of August 15 through August 19, 1977.

Representatives from three Vocational-Technical Schools - Southeastern, Eastern, and Western; two comprehensive high schools - Dulaney and Catonsville; and the Catonsville Community College participated in the workshop to develop a proposal for an integrated curriculum.

The workshop participants determined that students often repeat introductory material, experiences, and courses upon enrolling in an electronics college program. Although the Catonsville Community College has a credit-by-examination policy, by which the student may challenge many of the college courses for credit, many students are reluctant, for various reasons, to take advantage of this alternative.

The similarity of the electronics curricula ideally offers a basis for an articulation agreement and the presentation of an integrated program. By initiating an integrated program, a student would be aware that he or she could bypass the college course and still receive college credit by advanced placement through an earnest attempt for higher achievement on the high school level. This would provide incentives for the student to continue on and complete the degree requirements on the college level; an opportunity to broaden technical competency; to strive for excellence on the high school and Vocational-Technical School level, and even to encourage enrollment in both the high school and college electronics curricula.

Through the Articulation Program and the resulting newly developed channels of communication, the Catonsville Community College will gain additional insight as to how better serve the individual needs of the participating students.

This document represents the efforts of the workshop to ease the students transition from high school to college. Not only were the participants able to present concrete articulation proposals, but through working together got to know each other and gained valuable insight into the programs conducted at each institution. A spirit of continuing cooperation and mutual respect has developed from the workshop, which will promote better communications between the comprehensive high schools, the Vocational-Technical Schools, and the Catonsville Community College.

## PROJECT OBJECTIVES

The workshop participants agreed upon seven objectives for the project.

1. Examine each institution's course objectives and learning sequences in the electronic areas.
2. Compare the course objectives and learning experiences.
3. Recommend changes, if necessary, to obtain uniformity in course objectives and learning experiences.
4. Develop an articulation agreement.
5. Develop implementation procedures at the participating institutions.
6. Develop follow-up procedures to evaluate the effectiveness of the articulation agreement.
7. Develop articulation credit examination for articulated courses.

## Articulation Agreement

Baltimore County High Schools and Vocational Technical Schools
to Catonsville Community College

Catonsville Community College has agreed to grant college credit to students completing the Electronics Program at a Baltimore County High School or Vocational Technical School for the following courses:

| | | |
|---|---|---|
| ELE 101 | Fundamentals of Electronics I | 4 credits |
| ELE 102 | Fundamentals of Electronics II | 4 credits |

The following criteria must be met in order for the students to receive the credits:

1. Students shall complete an equivalent two year articulated Electronics Program at a Baltimore County High School or Vocational Technical School with an average grade of B or better.

2. Credit for the articulated courses shall be awarded upon the successful completion of the articulation credit examination with a grade of 70% or better. A letter of certification from the electronics instructor and verified by the school principal will then be issued.

3. Request by the student for the credit must be made within two years after graduation from the High School or Vocational-Technical School.

4. The letter of certification shall mean that the student has satisfied the requirements of the articulated electronics program at the High School or Vocational-Technical School. This includes the following articulated courses, areas and laboratory experiences.

| Articulated Courses | Areas | Laboratory Experience |
|---|---|---|
| ELE 101 | Voltage and Current | Voltage/Current Relationships |
| | Scientific Notation | Resistance in Series |
| | Resistance in Series | Resistance in Parallel |
| | Resistance in Parallel | Resistance in Series Parallel |
| | Resistance in Series Parallel | Electrical Power in "R" |
| | Electrical Power in "R" | Capacitance |
| | Capacitance | Inductance |
| | Inductance | The Sinusoidal Waveform |
| | The Sinusoidal Waveform | Inductive Reactance |
| | Opposition in AC Circuits | Capacitive Reactance |
| | RC Circuit Response | Impedance |
| | RL Circuit Response | RC Circuit Response |
| | Vector Algebra | RL Circuit Response |
| | | RCL and Resonance |
| | RCL &Resonance | Power in AC Circuits |
| | Power in AC Circuits | |

| Articulated Courses | Areas | Laboratory Experience |
|---|---|---|
| ELE 102 | Resonance | Resonance |
| | Filters | Filters |
| | Transformers | |
| | Power Supplies | Power Supplies |
| | Voltage Multipliers | Voltage Multipliers |
| | Voltage Regulation | Voltage Regulation |
| | Basic Amplification | |
| | Voltage Amps | Voltage Amps |
| | Feedback Amplifiers | Feedback Amplifiers |
| | F.E.T.'s | |
| | Frequence Response | Frequency Response |
| | Power Amplifiers | Power Amplifiers |
| | Multistage Amplifiers | |
| | Oscillators | Oscillators |
| | Communication Systems | Communication Systems |

## IMPLEMENTATION PROCEDURE

### High School and Vocational-Technical Schools
### Implementation Procedures with Catonsville Community College

I. Implementation Procedure at the Community College

A. To implement the articulation agreement at the community college, the following procedure is proposed:

1. The College will set up Admissions Office and Record Office procedures to handle students that are certified for credit from High School/Vocational Technical schools. (See Part I-B below for sample procedure.)

2. Program coordinators at the College will interview the students and maintain files for follow-up of students receiving the certification for credit.

B. Suggested procedure for community college admission of student with letter of certification.

1. When applying for admission to CCC, the student will present the appropriate letter of certification along with the application for admission.

2. The records office at the college will grant a grade of "S" for the course(s) certified. The grade(s) will be recorded on the student's record with the notation "Credit Per Articulation Agreement," and the letter of certification retained in the student's file.

3. The college records office will forward a copy of the student's record with the course credit awarded to the Program Coordinator. The Program Coordinator will notify the high school/Vocational-Technical School instructor.

4. The student may register for the next course in the curriculum sequence.

II. Implementation Procedure at the High School/Vocational-Technical Schools.

A. To implement the articulation agreement at the High School/Vocational-Technical schools, the following procedure is proposed:

1. The schools will communicate the details of agreements to the Coordinator of Industrial Arts and Vocational Education, principals, teaching faculty, guidance personnel, work-study coordinators and students.

2. The schools will develop methods of publicizing the agreements in order to encourage students to take advantage of this opportunity.

3. The schools will develop a procedure for certifying students for credit in the course or courses for which he or she is eligible for articulation credit. The original of this letter will be given to the student, a copy will be mailed to the CCC Electronics Department Coordinator. (See sample letter of certification

III. Articulation Agreement Maintenance and Review

A. The Articulation Agreement shall be reviewed at least every three years by representatives of the Industrial Arts and Vocational Technical Programs and the CCC Electronics Department.

B. Revisions of applicable course syllabi at any of the participating schools or CCC should be sent to the applicable instructors.

Sample Letter of Articulation Certification

High School/Vocational-Technical School

TO: CCC _____ Representative/Coordinator

Verification of Credit

_____
Division Head

## FOLLOW-UP PROCEDURE

In order to provide for objective evaluation of the articulation agreement, the following procedures were agreed upon by the workshop participants to develop a greater understanding of each institution's progress and allow for a more precise evaluation of students accomplishment:

1. The Program Coordinator in the Electronics Department at the College will maintain records of students certified for articulated credit.

2. Progress of students receiving credit will be monitored annually until completion of the program or termination.

3. Progress of each student will be provided annually to the recommending teacher.

4. At the end of two (2) years, the articulation agreement will be evaluated and thereafter on an annual basis, to include the following for participating students:

   a. Number of students who complete the degree or certification program.

   b. Number of students who withdraw from the program.

   c. Number of high school and Vocational-Technical students who select the Articulation Program rather than the Catonsville Community College credit-by-examination.

   d. Percentage of electronics Articulation Program students who find related employment and/or continue educational goals.

   e. A copy of the annual report will be sent to the Coordinator of Industrial Arts and Vocational Education of Baltimore County, the Catonsville Community College Division Head, and Director of Career Programs.

5. At the end of three years, the Coordinator of Electronics at Catonsville Community College will sponsor a meeting to re-evaluate the Articulation Agreement.

## SUMMARY

During the entire workshop on Articulation of Electronics Technology, an atmosphere of mutual respect and dedication to purpose developed. The similarity of the electronics courses in use at the participating institutions, the need to minimize needless repetition, and the need to encourage students to further pursue their electronics training provided emphasis for early concurrence on an articulation agreement.

However, the articulation agreement, its policies and procedures, will be of little or no value unless ultimately the electronic students, and potential students are properly informed of its existence and understand its full significance. The participants of this workshop wholeheartedly encourage the Baltimore County School System, in particular the individual schools, to give proper emphasis when publicizing the articulation agreement.

The following were viewed as significant accomplishments of the workshop:

Providing the high school instructors with a first hand knowledge of the community college program.

Providing the college staff with first hand knowledge of the high school/vocational school programs.

Identification of specific skill and knowledge factors necessary for successful completion of college programs.

Establishment of an integrated program to encourage continued technical education.

Construction of an evaluation instrument.

The participants also realize the importance of the follow-up procedure, as well as the necessity for a conference to re-evaluate the articulation agreement in the near future to ensure the success of the agreement.

Hopefully, because of the renewed cooperation, understanding and respect resulting in the initial success of this workshop, other disciplines will be encouraged to undertake a similar endeavor. Indeed this has been a most worthwhile and profitable experience for all concerned.

# APPENDICES

# COURSE OUTLINES

# AND OBJECTIVES

OBJECTIVES AND COURSE OUTLINES

CATONSVILLE COMMUNITY COLLEGE

CATONSVILLE COMMUNITY COLLEGE
Catonsville, Maryland 21228

Math/Engineering Division

1. Course Title:

   Fundamentals of Electronics I ELE 101 (4:3,3)

2. Textbooks:

   Direct and Alternating Current
   Second Edition - Oppenheimer, Hess, Borchers
   McGraw-Hill, 1972

3. Course Objectives:

   See attachment #1

4. Sequence of topics and time allocations:

   See attachment #2

5. Teaching Procedures and Classroom activities:

   Lecture - discussion - demonstration and student participation

6. Grading Practice: See teacher of the course for this information.

   50% lecture
   50% lab experience

7. Attendance Policy:

   See attachment #3

Attachment #1
ELE-101 COURSE OBJECTIVES

1. The student will demonstrate an understanding in the areas of measurement. The student will calculate basic quantities using scientific notation and sliderule.

2. The student will demonstrate an understanding in the area of atomic structure and electrostatics. The student will calculate basic formulas of charge.

3. The student will demonstrate an understanding in electrical units of measurement such as charge, voltage, current and resistance. The student will calculate these quanities and their relationships for DC type circuits.

4. The student will demonstrate an understanding in the area of Ohm's Law. To calculate the relationships of Ohm's law circuits, such as series, parallel and complex DC circuits.

5. The student will demonstrate an understanding in the area of AC measurements. The student will calculate average, effective voltage and current. The student will also calculate frequency of AC waveforms.

6. The student will demonstrate an understanding in the theory of capacitance both DC and AC circuits. The student will calculate several physical and electrical properties of capacitance.

7. The student will demonstrate an understanding in Electromagnetic induction DC and AV circuits. The student will calculate several physical and electrical properties of inductance.

8. The student will demonstrate an understanding in R-L-C circuit analysis AC circuits. The student will analysis using trigomometry and the V-operator to solve circuit problems. Problems will include series and parallel circuits.

9. The student will demonstrate an understanding in theory of series and parallel resonant circuits. The student will be able to calculate all conditions of resonant circuits.

The Following Objectives Pertain to Lab

1. The student will demonstrate his ability to perform with VOM, VYVM, AF and RF signal generator, frequency counter and Oscilloscope basic measurements of electrical components and also their relationships discuss in lecture class.

2. The student will verify with test equipment laws and relationships discuss in lecture class such as:

A) Ohm's Law - series, parallel, complex
B) Capacitance - DC and AC
C) Inductance - DC and AC
D) Resonant circuits - series and parallel
E) AC waveform measurements

## SEQUENCE OF TOPICS AND TIME ALLOCATIONS

I. Fundamental, Quantities and Concepts — 1 week

- A. Length, mass and time
- B. Structure of the atom
- C. Charge
- D. Coulombs law

II. Physical and Electrical Units — 1 week

- A. Length, mass and time
- B. Work, energy and power
- C. Electric circuit
- D. Voltage, current and resistance

III. Chin's Law and Power — 3 weeks

- A. Ohm's law
- B. Series circuit DC
- C. Parallel circuit DC
- D. Complex circuit DC
- E, Power

IV. Capacitance — 1 week

- A. Physical
- B. Electrical
- C. DC - time constants
- D. AC - phase
- E. Reactance

V. Inductance — 1 week

- A. Physical
- B. Electrical
- C. DC - time constant
- D. Phase
- E. Reactance

VI. RLC - Circuit Analysis — 3 weeks

- A. Pure resistance circuit
- B. Pure inductance circuit
- C. Pure capacitance circuit
- D. J operator

VII. Series and Parallel AC Circuits — 3 weeks

A. Impedance
B. Series AC circuit
C. Parallel AC circuit
D. Power in AC Circuit

VIII. Series and Parallel Resonant Circuits — 2 weeks

A. Series resonance
B. BW and Q
C. Parallel resonance
D. BW and Q

CATONSVILLE COMMUNITY COLLEGE
Catonsville, Maryland 21228

Math/Engineering Division

1. Course Title:

   Fundamentals of Electronics II
   ELE-102 (4:3,3)

2. Textbooks:

   Communications Electronics Circuits, Second Edition
   J. J. DeFrance, Rinehart Press, 1972

3. Course Objectives:

   See attachment #1

4. Sequence of topics and time allocations:

   See attachment #2

5. Teaching Procedures and Classroom activities:

   Lecture - discussion - demonstration and student participation

6. Grading Practice: See teacher of the course for this information.

   50% lecture
   50% lab experience

7. Attendance Policy:

   See attachment #3

Attachment #1
Course Objectives

1. The student will demonstrate an understanding of the resonant circuits by problem solving circuit analysis, and by measurements made by lab performances.

2. The student will demonstrate by problem solving and circuit analysis the understanding of basic coupling circuit. The student will also perform tuning techniques to support theory.

3. The student will demonstrate by problem solving and basic circuit measurements of RF voltage amplifiers, the understanding of voltage amplification.

4. The student will demonstrate by problem solving and basic circuit measurements of RF Power Amplifiers, the understanding of Power amplification.

5. The student will demonstrate an understanding of RF Oscillator circuits by drawing schematics and performing frequency measurements on RF Oscillators.

6. The student will demonstrate an understanding of AM, SSB, FM, modulation techniques by problem solving and performing with oscilloscope various waveform measurements with these modulation techniques.

7. The student will demonstrate the understanding of AM SSB, FM, receiving techniques, by problem solving and performing various waveform measurements and also alignment practices.

Attachment #1
Lab Objectives

The student shall demonstrate an understanding of the following course content by lab performance.

1. The fundamentals of resonance, series and parallel, circuit Q, bandwidth, and applications of resonance.

2. Filter circuits including high pass, low pass, and bandpass characteristics.

3. Basic electronic power supplies, filtering, voltage division, and regulation.

4. The fundamentals of basic circuitry including amplifiers, oscillators, detectors, and mixers.

5. The fundamentals of modulation and modulators, transmitters, and transmission of electromagnetic energy.

6. Receiver analysis covering fidelity, selectivity, distortion, and alignment procedures.

Attachment #2
Sequence of Topics and Time Allocations

I. Resonance — 1 week

A. Series Resonance
   1. Circuit Q
   2. LC product
   3. Voltage ratios
B. Parallel Resonance
   1. Currents in parallel
C. Uses of Resonant Circuits

II. Basic Electronic Circuits — 1 week

A. Filter Action
   1. Types of filters
B. Band Pass Filters
C. Impedance Matching

III. R-F Voltage Amplifiers — 1 week

A. Impedance-Coupled R-F Amplifiers
   1. Gain, bandwidth, multistage response
   2. Stagger tuning
B. Double-Tuned Transformer-Coupled R-F Amplifiers
   1. Bandwidth, gain
C. High Frequency Circuits

IV. R-F Power Amplifiers — 2 weeks

A. Class C Amplifiers
   1. Voltage and current relations
   2. Grid bias
   3. Plate power supply
   4. Parallel operation
   5. Push-pull operation
B. Neutralization in Class C Amplifiers
   1. Techniques
   2. Circuits
C. Class B Linear Amplifier

V. R-F Oscillators — 1 week

A. General Considerations
   1. Tank circuit action
   2. L-C circuit analysis

B. Basic Oscillator Circuits
   1. Armstrong
   2. Grid leak bias
   3. Shunt and series fed bias
   4. Hartley, Colpitts oscillator
   5. Stability of oscillators

C. Crystal Oscillators
   1. Crystal cuts
   2. Temperature effort

VI. Amplitude Modulation — 2 weeks

A. Analysis of A.M. Waves
   1. Effect of modulating signal
   2. % modulation
   3. Power in A.M. wave
   4. Sidebands

B. Plate Modulation
   1. Basic principles

C. Basic Transmitters

VII. Demodulation of A.M. Waves — 1 week

A. Basic Principles
   1. Diode detector
      a. Basic circuit action

B. Other types of A.M. Detectors
   1. Grid-leak, plate

VIII. A.M. Receivers — 2 weeks

A. Receiver Comparison Factors
   1. Sensitivity, selectivity, fidelity, noise ratio

B. Superheterodyne Receivers

C. Receiver Alignment

IX. SSB Transmission and Reception — 2 weeks

A. Filter and Phasing Methods
B. Balance Modulators
C. Product Detectors
D. BFO
E. Carrier Reinsertion

X. FM - Transmission and Reception 2 weeks

A. FM Waveforms
B. Reactance Modulator
C. Limiters
D. Discuminators
E. Ratio Detector

COURSE OUTLINES AND OBJECTIVES

BALTIMORE COUNTY HIGH SCHOOLS AND

VOCATIONAL-TECHNICAL SCHOOLS

**Program:** POWER TECHNOLOGY

**Course Title:** INTRODUCTORY ELECTRONICS

**County Course No.:** 7980 **5 periods/week** **1 credit**

**Number of weeks:** 36

**Course Description:**

**A beginning course in electronics which deals with basic electronic principles and applications. Students participating in this course conduct experiments and construct projects related to electrical measurement, circuit theory and tube and solid state devices.**

**Activities include demonstrations, experiments and the construction of several take-home projects.**

**Prerequisities and other notes:**

**Elective for grades 9, 10, 11, and 12**

COURSE OUTLINE: Electronics I

| CONTENT TOPICS | PROGRAM GOALS |
|---|---|
| I. Orientation | Familiarize students with course goals, objectives and requirements and the location of laboratory facilities. |
| II. Fundamental Concepts | Acquaint students with basic physics, basic electrical terms, and electronic construction techniques. |
| III. Sources of Electrical Power | Familiarize students with the means of creating potential differences in order that they will be able to select the appropriate sources of electrical power. |
| IV. General Safety | Develop student understanding of the safety precautions that must be observed when working with electronic devices in order to insure individual safety. |
| V. Use and Care of Measurement Instruments | Familiarize students with the function and use of basic test instruments and the precautions required in order to conduct a circuit analysis. |
| VI. Resistors | Develop student understanding of the effects of resistance and the materials and components used to create resistance in order that they will be able to select the proper circuit resistive components. |
| VII. Basic Circuits | Enable students to recognize the basic difference in circuit arrangements and to analyze the operational characteristics of each in order that they will be able to construct and maintain simple circuits. |
| VIII. Magnetism, Electro-magnetism | Acquaint students with the theories of magnetism and their applications to electrical circuits. |

COURSE OUTLINE: Electronics I

| CONTENT TOPICS | PROGRAM GOALS |
|---|---|
| IX. Inductors | Develop student understanding of inductor functions and the ability to identify the factors which determine inductor value, ratings and effects on circuit operation. |
| X. Transformers | Enable students to select the proper transformer and utilize it in a specific circuit. |
| XI. Capacitors | Develop student understanding of capacitor functions and the factors that determine capacitor values, ratings and applications in circuit operation. |
| XII. Tubes/Solid State Devices | Familiarize students with the basic operations, limitations and ratings of vacuum tubes and solid state devices and their application in the control, amplification and rectification of electrical energy. |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| I. Orientation | The student will: | | |
| A. Laboratory Procedures | | | |
| B. Program Goals and Objectives | become aware of the goals, objectives and requirements of the course. | | |
| C. Laboratory Tour | become familiar with the location of the laboratory facilities and the location of safety equipment. | Locate on a floor plan all safety devices and physical features of the laboratory. | |
| II. Fundamental Concepts | | | |
| A. Atomic Structure<br>1. Conductors<br>2. Insulators<br>3. Semiconductors | be able to differentiate between types of conductors and insulators. | Perform experiments using laboratory manuals and/or available equipment. | D-1-1 |
| B. Basic Terms and Prefixes<br>1. Basic Circuit<br>2. Coulomb<br>3. Ampere<br>4. Volt<br>5. OHM<br>6. MHO<br>7. Watt | be able to define and apply various units of electrical measurement. | | |
| C. Construction Techniques | be able to properly solder electrical connections. | Perform a practice soldering exercise.<br>Participate in review. | D-1-2 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| C. Construction Techniques | | Take a test related to fundamental concepts. | D-1-3 |
| | | Begin Construction Project 1 | D-1-4, 5, 6 |
| III. Sources of Electrical Power | The student will: | | |
| A. Direct Current<br>1. Friction<br>2. Pressure<br>3. Heat<br>4. Light<br>5. Magnetism<br>6. Chemical action | be able to identify and explain the various types and sources of electrical potential. | Perform voltaic cell experiment using laboratory manual, or related improvised experiment. | D-1-7 |
| B. Alternating Current<br>1. Alternator<br>2. Oscillator<br>a. P<br>b. P-P<br>c. RMS<br>d. Average<br>e. Frequency | be able to explain the differences between and the uses of AC and DC voltage.<br><br>be able to identify the various mathematical values of AC. | Perform oscilloscope experiment using audio generator.<br><br>Participate in a review of sources of electrical power.<br><br>Take a test related to sources of electrical power. | D-1-8<br><br>D-1-9 |
| IV. General Safety | | | |
| A. Shock hazards | demonstrate proficiency in safety and emergency procedures by passing a safety examination. | Become familiar with safety and protection devices. Understand emergency and evacuation procedures. Perform safety-related experiment. | |
| B. Laboratory Familiarization | | Take and pass a safety test (to be filed by the teacher). | D-1-10 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| | | Project 1 completed | D-1-11 |
| V. Proper Use and Care of Measuring Instruments | The student will: | | |
| A. Ohmmeter<br>B. Voltmeter<br>C. Ammeter<br>D. Wattmeter<br>E. Watt-hour meter<br>F. VOM<br>G. VTVM | be able to demonstrate the ability to properly utilize test instruments. | Select, set up, adjust, connect, and read the appropriate meters for measuring various quantities in electrical circuits. (With instructor's approval).<br>Perform experiments related to ohmmeter, voltmeter, and ammeter utilization.<br>Participate in a review on the use and care of measuring instruments. | D-1-12 |
| | | Take a test related to the use and care of measuring instruments. | D-1-13 |
| VI. Resistors | The student will: | | |
| A. Safety<br>B. OHM's Law<br>C. Color Code<br>D. Tolerance<br>E. Watt's Law (power) | be able to select and utilize the appropriate resistor in a selected circuit.<br>be able to test, calculate, install, and determine the effects of resistance in any given circuit. | Select and properly install resistors based on an understanding of ratings and the several methods of indicating values<br>Perform resistor experiments.<br>Participate in a review of resistors. | D-1-14 |
| | | Take a test related to resistors | D-1-15 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| VI. Resistors (Cont'd) | The student will: | | |
| F. Kinds/types | | | |
| G. Applications | | | |
| H. Defects | | | |
| VII. Basic Circuits | | | |
| A. Safety | be able to recognize and identify series, parallel and complex circuits. | Recognize and construct basic series, parallel, and complex circuits utilizing resistive elements from schematics. | |
| B. Series | be able to construct, test, and analyze series, parallel, and complex circuits. | Perform experiments to analyze and test series, parallel, and complex circuits with respect to current, voltage, and resistance. | D-1-16 |
| 1. Kirchoff's Law | | | |
| C. Parallel | be able to detect, locate, and correct defects in the three major circuits. | | |
| D. Complex | be able to select the proper circuit for a given need. | | |
| E. Schematics and Pictorials | | Take quizzes related to basic circuits. | D-1-17 |
| | | Participate in a review on basic circuits. | |
| | | Take a test related to basic circuits | D-1-18 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| VII. Basic Circuits (Cont'd) | | Begin Project 2 | D-1-19, 20, 21 |
| VIII. Magnetism, Electromagnetism | The student will: | | |
| A. Creation | be able to understand and explain the relationship between the laws of magnetism and the laws of electricity. | Perform experiments related to the basic laws of magnetism and electromagnetism. | D-1-22 |
| B. Uses | be able to identify the devices that utilize electromagnetic energy. | | |
| C. Control | | Take quizzes related to magnetism and electromagnetism. | D-1-23 |
| | | Participate in a review on magnetism and electromagnetism. | D-1-24 |
| IX. Inductors | | | |
| A. Safety | be able to select and utilize the appropriate inductor in a selected circuit. | Select and properly install inductors based on an understanding of ratings and the several methods of indicating values. | |
| B. Self inductance C. E. M. F. | be able to test, install, and determine the effects of inductors in any given circuit. | Perform experiments related to inductors. | D-1-25 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| IX. Inductors (Cont'd.) | The student will: | | |
| C. Units of measure/ prefixes | | Participate in a review related to inductors | |
| D. Kinds/types | | | |
| E. Applications<br>1. DC<br>2. AC | | | |
| F. Defects/testing | | Take a test related to inductors. | D-1-26 |
| G. Circuits<br>1. Series<br>2. Parallel<br>3. Complex | | | |
| H. RL time constant | | | |
| I. Reactance | | | |
| J. Impedence | | Complete Project 2 | D-1-27 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| X. Transformers | The student will: | | |
| A. Safety | be able to select and utilize the appropriate transformer in a selected circuit. | Select and properly install transformers based on an understanding of ratings and the several methods of indicating value. | |
| B. Mutual inductance | be able to test, install, and determine the effects of a transformer in any given circuit. | Perform experiments related to transformers. | D-1-28 |
| C. Kinds and uses | | | |
| D. Ratings/turns ratio | | | |
| E. Defects/testing | | Take a test on transformers. | D-1-29 |
| XI. Capacitors | | | |
| A. Safety | be able to select and utilize the proper capacitor in a selected circuit. | Select and properly install capacitors based on an understanding of ratings and the several methods of indicating values. | |
| B. Units of measure/ prefixes | be able to test, install, and determine the effects of capacitance in a selected circuit. | Perform experiments related to capacitors. | D-1-30 |
| C. Kinds/types | | | |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XI. Capacitors (Cont'd.) | The student will: | | |
| D. Applications<br>1. DC<br>2. AC | | Participate in review related to capacitors. | |
| | | Take a test related to capacitors | D-1-31 |
| E. Defects/testing | | | |
| F. Circuits<br>1. Series<br>2. Parallel<br>3. Complex | | | |
| G. RC time constant | | | |
| H. Reactance | | | |
| I. Impedence | | | |
| | | Begin Construction of Project 3 | D-1-32, 33, 34, 35, 36, 37 |
| XII. Tubes/Solid State Devices | | | |
| A. Safety | be able to test a vacuum tube for proper operation. | Test and analyze diode and triode vacuum tubes for operational characteristics, functions, and defects. | |
| B. Diodes<br>1. Construction<br>2. Rating<br>3. Operation | be able to assemble a vacuum tube from a schematic. | Perform an experiment using tube devices. | D-1-38 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XII. Tubes/Solid State Devices (Cont'd.)<br><br>4. Types/uses<br>a. Power supplies<br>b. Detection<br>5. Statics<br>6. Dynamic load line<br>7. Defects/testing | The student will: | | |
| C. Triode<br>1. Construction<br>a. Cathode<br>b. Grid<br>c. Anode<br>2. Operation<br>3. Types/uses<br>a. Amplifier<br>1) Current<br>2) Voltage<br>4. Static<br>5. Dynamic<br>6. Defects/testing | be able to determine the basic operation of vacuum tube circuits. | Use appropriate instruments to measure and analyze the operation of the constructed project. | D-1-39 |
| D. Tetrode | | | |
| E. Pentode | | | |
| F. Transistors<br>1. Types<br>a. PNP<br>b. NPN | be able to test a solid state device for its proper operation using resistance and voltage measurements. | Test and analyze solid state devices for their operational characteristics, functions, and defects. | |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics I

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XII. Tubes/Solid State Devices (Cont'd.)<br><br>2. Uses<br>3. Operation<br>4. Characteristics<br>a. Static<br>b. Dynamic<br>5. Defects/testing | The student will: | Participate in a review related to tubes and solid state devices.<br><br>Take a test related to tubes and solid state devices. | <br><br><br><br><br><br>D-1-40 |

**Program:** POWER TECHNOLOGY

**Course Title:** ADVANCED ELECTRONICS

**County Course No.:** 7970 **5 periods/week** **1 credit**

**Number of weeks** 36

**Course Description:**

**Advanced Electronics is designed to provide the student with an opportunity to further develop understandings of the concepts presented in Introductory Electronics. In addition, the student will conduct experiments and construct take-home projects based on a study of the principles and operation of modern amplifiers and receivers.**

**Prerequisites and other notes:** Introductory Electronics

**Preference given to 11th grade students.**

I. COURSE OUTLINE: Electronics II

| CONTENT TOPICS | PROGRAM GOALS |
|---|---|
| I. Orientation | Familiarize students with course goals, objectives, and requirements and the location of laboratory facilities. |
| II. Review | Assess student understanding of basic electronic concepts presented in Electronics I. |
| III. Fundamentals of Radio Receivers | Develop student understanding of the fundamentals of radio receiver concepts and construction. |
| IV. Tubes | Review and further develop student understanding of vacuum tubes. |
| V. Solid-State Devices | Review and further develop student understanding of solid-state devices. |
| VI. Amplifiers | Familiarize students with concepts related to various types of amplifiers. |
| VII. Speakers | Develop student understanding of speaker characteristics and applications. |
| VIII. Microphones | Acquaint students with microphone characteristics and applications. |
| IX. Oscillators | Develop student ability to identify the kinds and types of oscillators and to understand the fundamental principles of oscillators. |
| X. Modulation | Develop student understanding of the principles of modulation. |
| XI. Demodulation | Develop student understanding of the principles of demodulation. |
| XII. AVC/AGC Circuits | Familiarize students with the purposes and operation of typical AVC/AGC circuitry. |
| XIII. I. F. Amplifier | Acquaint students with the characteristics of the I. F. amplifier. |

I. COURSE OUTLINE: Electronics II

| CONTENT TOPICS | PROGRAM GOALS |
|---|---|
| XIV. Converter | Develop student understanding of converters and their application to heterodyning. |
| XV. Antennas | Familiarize students with antenna fundamentals. |
| XVI. Wave Propagation | Acquaint students with the fundamentals of wave propagation. |
| XVII. Consumer Knowledge | Familiarize students with various electronic components, the methods of rating components and their applications in everyday use. |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| I. Orientation | The student will: | | |
| A. Laboratory Procedures | | | |
| B. Program Goals and Objectives | become aware of the goals, objectives and requirements of the course. | | |
| C. Laboratory Tour | become familiar with the location of the laboratory facilities and the location of safety equipment. | Locate on a floor plan all safety devices and physical features of the laboratory. | |
| II. Review | | | |
| A. Resistors | review the terminology, components, and instruments that were studied in Electronics I | Participate in a review of Electronics I content topics. | |
| B. Capacitors | | | |
| C. Inductors | | | |
| D. Transformers | | | |
| E. Tubes - Semiconductors | | | |
| F. Circuits | | | |
| G. Meters - Instruments | Participate in a class review of electronics laboratory safety practices. | Take a test related to Electronics I content topic review. | D-2-1 |
| H. Safety | | Begin construction of Project 1 by preparing the box and box top | D-2, -3, -4, -5, -6 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| III. Fundamentals of Radio Receivers | The student will: | | |
| A. AM | become familiar with the basic circuitry used in AM and FM receivers. | Participate in class discussions related to block diagrams of AM and FM receivers. | |
| B. FM<br>1. Monaural<br>2. Stereo<br>3. Quadraphonic | | Participate in a review of AM and FM receiver block diagrams<br>Take a test related to AM and FM receiver fundamentals.<br>Layout and etch the printed circuit board for Project 1. | D-2-7 |
| IV. Tubes | | | |
| A. Types | be able to identify various types of tubes from circuit applications. | Perform laboratory experiments involving static/dynamic characteristics. | D-2-8 |
| B. Terminology<br>C. Construction | be able to determine tube operating points on various load lines. | Participate in a review of tube characteristics. | |
| D. Operation | | Take a test related to tube characteristics. | D-2-9 |
| E. Static/Dynamic Characteristics | be able to define tube characteristics and apply them in a simple circuit. | Mount all Project 1 components and test resistors, capacitors and speaker for proper operation. | |
| F. Bias<br>G. Lead Line | be able to identify various types of bias | | |

-42-

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| V. Solid-State Devices | The student will: | | |
| A. Types<br><br>B. Terminology | be able to identify various types of solid state devices from circuit applications. | Perform laboratory experiments involving transistor static/dynamic characteristics, bias and load line. | D-2-10 |
| C. Construction<br>1. Diode<br>2. Transistor<br>3. SCR | be able to explain diode operation | | |
| D. Operation<br>1. Diode<br>2. Transistor<br>3. SCR | be able to determine transistor operating points on various load lines. | | |
| E. Static/Dynamic Characteristics | be able to define solid state device characteristics and apply them in a circuit. | Participate in a review of solid-state devices. | |
| | | Take a test related to solid-state devices. | D-2-11 |
| | | Test Project 1 transistors with VTVM before mounting on printed circuit board. | |
| | | Perform circuit resistance checks on Project 1 transistors using a VTVM. | |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| VII. Speakers | The student will: | | |
| A. Shapes<br>B. Sizes<br>C. Ratings | be able to identify speakers according to shape, size and ratings. | Observe demonstrations related to speaker ratings, impedance, and cross-over networks. The effects of various enclosures may also be observed. | |
| D. Operation | be able to properly impedance match speaker to amplifier | | |
| E. Matching to Amplifier<br>F. Cross-over Network<br>G. Enclosures | be able to identify the uses of cross-over networks and the purpose of enclosures. | | |
| VIII. Microphones | | | |
| A. Types<br>B. Ratings | be able to identify microphones according to types and ratings. | Observe demonstrations related to microphone types, ratings and matching. | |
| C. Matching to Amplifier | be able to properly match a microphone to an amplifier. | Participate in a review of speakers and microphones.<br>Take a test related to speakers and microphones. | D-2-15 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| IX. Oscillators | The student will: | | |
| A. Definition | be able to define oscillators by type and method of operation. | Perform oscillator experiments using available equipment. | D-2-16 |
| B. Types<br>1. Armstrong<br>2. Hartley<br>3. Colpitts<br>4. Crystal | be able to identify typical uses of each type | Participate in a review of oscillators. | |
| C. Methods of Coupling | be able to define purpose and methods of coupling. | Take a test related to oscillators. | D-2-17 |
| X. Modulation | | | |
| A. Definition | be able to define and identify an AM and FM wave envelope and determine percentage of modulation power. | Perform experiments on AM modulation observing the characteristics of the wave envelope. | |
| B. Types<br>1. AM<br>2. FM | | | |
| C. Principles of AM Modulation<br>1. Keying<br>2. CW Transmitters<br>3. Wave Envelope<br>4. Percentage of Modulation<br>5. Power and Sideband | be able to identify typical uses of various modulation methods. | | |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| X. Modulation (Cont'd.)<br><br>D. Methods of Modulation<br>1. Plate<br>2. Grid<br>3. Cathode<br><br>E. Principles of FM Modulation<br>1. Wave Envelope<br>2. Percentage of Modulation<br>3. Power and Sidebands | | Participate in a review of modulation.<br><br>Take a test related in modulation principles and methods.<br><br>Prepare box and top for Project 2 | <br><br><br><br><br><br><br><br>D-2-19<br><br>D-2-20, 21, 22, 23 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XI. Demodulation | The student will: | | |
| A. Definition | be able to define demodulation. | | |
| B. Principles of AM Demodulation | be able to define operation and methods of AM demodulation. | Perform experiments related to AM demodulation. | D-2-24 |
| C. Methods<br>1. Diode<br>2. Class C Amp. | | | |
| D. Principles of FM Demodulation | | Make printed circuit board for Project 2. | |
| 1. Purposes of limiter<br>2. Purposes of discriminator<br>3. Common circuit arrangements | | Participate in class discussion of block diagram of FM demodulation. | |
| | | Participate in review of AM and FM demodulation. | |
| | | Take a test related to AM and FM demodulation. | D-2-25 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XII. AVC/AGC Circuits | The student will: | | |
| A. Purpose | be able to identify and explain the operation of typical AVC/ AGC circuits. | Participate in class discussions related to AVC/AGC circuits and their relationship to other circuits. | |
| B. Method of Operation | | | |
| C. Typical Circuit Arrangement | | Mount and test Project 2 detector section on printed circuit board using Project 1 amplifier. | |
| XIII. IF Amplifier | | | |
| A. Definition | be able to identify, define and explain the operation of IF circuits. | Perform experiments related to the IF amplifier. | D-2-26 |
| B. Purpose | | | |
| C. Method of Operation | | Install output IF and associated components on Project 2 printed circuit board. | |
| D. Circuits | | | |
| 1. Untuned | be able to differentiate between tuned and untuned circuits. | Test and align Project 2 output IF circuit. Install and test interstage and first IF on Project 2 printed circuit board. | |
| 2. Tuned (Resonance) | | | |
| a. Series and Parallel | be able to determine point of resonance and calculate "Q" and bandwidth. | | |
| b. "Q" and Bandwidth | | | |
| c. Stagger Tuning | | Participate in a review of IF amplifiers. | |
| | | Take a test related to IF amplifiers. | D-2-27 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XIV. Converter (First Detector) | The student will: | | |
| A. Definition | be able to identify and explain the operation of a typical converter circuit. | Perform experiments related to heterodyning. | D-2-28 |
| B. Purpose | | | |
| C. Circuits<br>1. Oscillator<br>a. Frequency<br>b. Methods of Tuning | | Install and test the Project 2 converter stage on the printed circuit board. | |
| 2. R.F.<br>a. Frequency<br>b. Methods of Tuning<br>c. Ganging with oscillator | be able to calculate oscillator and RF frequencies and resulting intermediate frequencies. | | |
| 3. Mixer<br>a. Methods of Coupling | | Participate in a review of converter circuits. | |
| b. Principles and Purposes of Heterodyning | be able to explain the principles and purposes of heterodyning. | Take a test related to converter circuits. | D-2-29 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XV. Antennas | The student will: | | |
| A. Definition | be able to identify and define the purposes and operation of various types of antennas. | Participate in class discussions related to antennas. | |
| B. Purpose | | | |
| C. Types<br>1. Hertz<br>2. Marconi<br>3. Special | be able to explain the meaning and purpose of impedance matching. | | |
| D. Characteristic Impedance | | | |
| E. Transmitter/ Receiver Antenna Comparisons | | Complete Project 2. | |
| | | Test and align Project 2 as necessary. | D-2-30 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XVI. Wave Propagation | The student will: | | |
| A. Wave Origin<br>1. Oscillator<br>2. Modulator | be able to associate the oscillator and transmitter. | Participate in class discussions related to wave propagation. | |
| | be able to explain the purpose and operation of modulators. | | |
| B. Power | | | |
| C. Wavelength/ Frequency | be able to associate and calculate wavelength and frequency. | | |
| D. Frequency Spectrum | | | |
| E. Methods of Wave Travel | be able to explain the various methods of wave travel for various types of transmission. | Participate in a review of wave propagation. | |
| | | Take a test related to wave propagation. | D-2-31 |

III. COURSE CONTENT - OBJECTIVE - ACTIVITY - EVALUATION SEQUENCE: Electronics II

| CONTENT TOPICS | SPECIFIC PROGRAM OBJECTIVES | STUDENT ACTIVITIES | ASSESSMENT PROCESS |
|---|---|---|---|
| XVII. Consumer Knowledge<br><br>A. Trouble-Shooting<br>1. Schematics<br>2. Electrical Specifications<br><br>B. Applications for Personal Use | The student will:<br><br>be able to identify components and circuits on a schematic.<br><br>be able to measure and interpret various values in a circuit using a schematic.<br><br>be able to intelligently select and purchase electronic components and devices | Participate in class discussions related to the importance of consumer knowledge when purchasing various pieces of electronic equipment having typical amplifier-receiver specifications. | |

EXAMINATIONS

Catonsville Community College
Catonsville, Maryland 21228

Articulation Credit Examination
for ELE-101 Credit

---

PART I - Multiple Choice. Place correct letter in space provided on answer sheet.

1. A resistor with color bands arranged in the following manner would represent:

A. 360K @ 10%
B. 36K @ 10%
C. 36K @ 5%
D. 350K @ 5%

2. Which of the following represents the greatest current?

A. 36 coulombs/minute
B. 20 coulombs/3 seconds
C. 0.33 coulombs/second
D. 10 coulombs/20 seconds

3. Convert 0.00052 Amps to milliamps.

A. .52
B. 5.2
C. 52
D. 520

4. $84 \times 10^5$ is equal to

A. 8.4K
B. 84K
C. 840K
D. 8.4M

5. Determine the direction of electron flow in the circuit at right.

A. Clockwise
B. Counterclockwise
C. No current is flowing

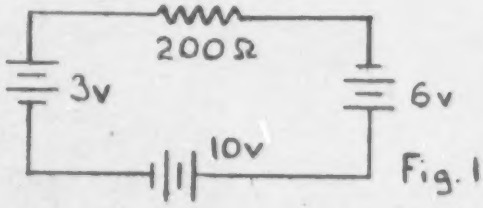

Fig. 1

6. In the circuit at right, $I_T$ =

A. .36mA
B. .4mA
C. 4mA
D. 36mA

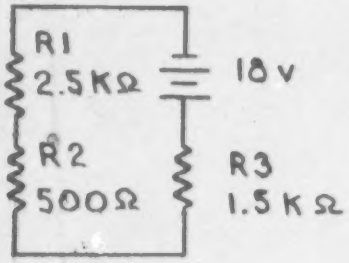

Fig. 2

7. In Figure 2, $V_{R3}$ =

A. 2V
B. 6V
C. 10V
D. 18V

8. In Figure 2, $P_{R2}$ =

A. 2mW
B. 4mW
C. 8mW
D. 72mW

9. In Figure #3, $R_T$ = _____

$V_A = 10v$

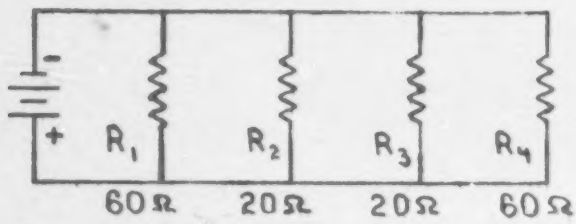

Fig. 3

A. 30
B. 7.5
C. 10
D. 100

10. In Figure #4, $R_2$ = _____

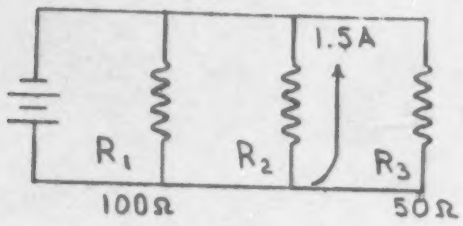

Fig. 4

A. 1.25
B. 12.5
C. 13.5
D. 125
E. 1.35

11. In Figure #5, $R_T$ = _____

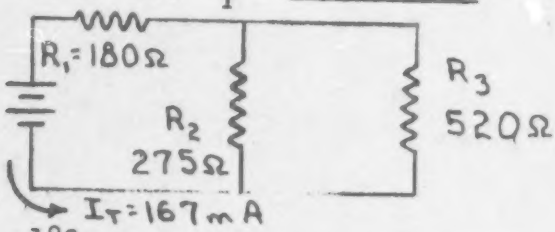

Fig. 5

A. 180
B. 243
C. 360
D. 975

12. The voltage applied in Figure #3 is _____V.

A. 2.2V
B. 5V
C. 50V
D. 60V

13. $P_{R2}$ in Figure 3 is _____mV.

A. 1.73
B. 3.27
C. 10
D. 32.

14. A 5 ohm and 10 ohm resistor in <u>series</u> will dissipate

A. equal power
B. different values of power

15. A 150W light bulb is in parallel with a 60W bulb

A. The 150W bulb draws more current
B. The 60W bulb draws more current
C. The two bulbs draw equal current

16. When using an ohmmeter, <u>never</u> use

A. it in series
B. it to measure capacitors
C. It in an energized circuit
D. all of the above

17. A voltmeter is used in parallel because it has a

A. low input resistance
B. high input resistance
C. low sensitivity
D. red and black leads

18. A milliammeter is always placed in <u>series</u> with the circuit because of:

A. low resistance
B. high resistance

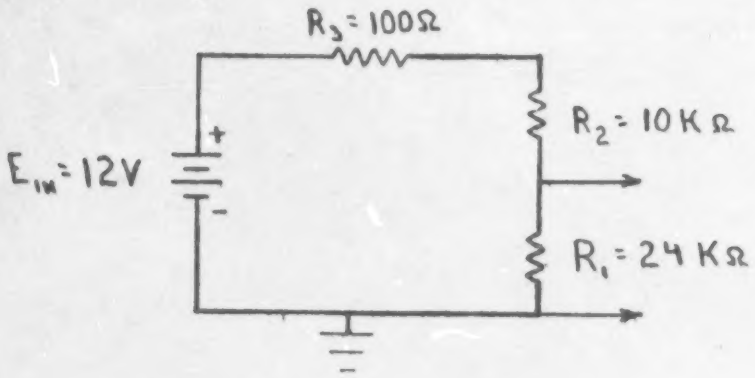
19. Ohmmeter measurements should be made with:

A. the circuit in operation
B. the circuit not in operation
C. high resistance ranges only
D. none of the above

20. A standby switch on a solid state DC power supply is used primarily for:

A. warmup of DC supply
B. circuit protection from initial circuit adjustments
C. placement of $V_{OM}$ in circuit for measurements
D. both A and C above

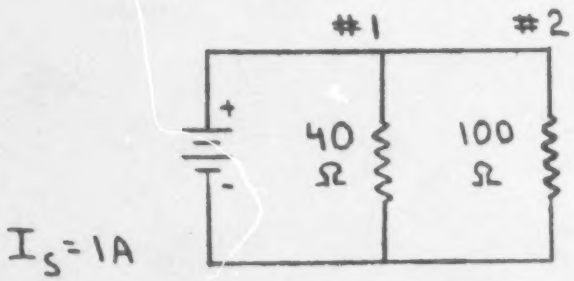
21. Determine the output voltage by the voltage divider rule.



$V_{R1}$ = _____

A. .304 V
B. 3.04 V
C. 2.15 V
D. .215 V
E. none of these

22. Solve each branch current by using the current divider rule.



$I_1$ = _____

Calculate current in branch #1 (40 ohm resistor) using current divider equation.

$I_1$ = _____

A. .725 A
B. .0725 A
C. .29 A
D. .029 A
E. none of these

23. What would the voltmeter read in Figure 6?

A. 15 V
B. 30 V
C. 75 V
D. 225 V

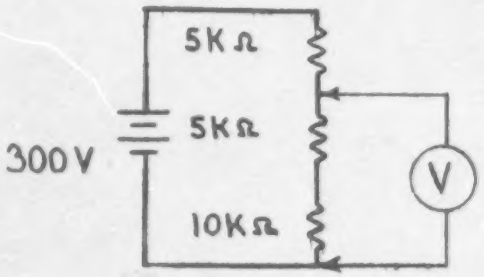


Fig. 6

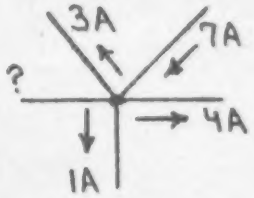
24. The unknown current flow at the junction at the right would be

A. 0
B. 1A into junction
C. 1A out of junction
D. 15A out of junction



25. The material separating the two plates of a capacitor is called a/an

A. inductor
B. farad
C. coulomb
D. dielectric

26. Capacitance causes 90° lag in

A. voltage
B. current
C. ohms

27. In Figure 7, $V_c$ would reach 6 V in

A. one time constant
B. two time constants
C. five time constants

28. In Figure 7, the current would be _____ in 60m Seconds:

A. .28mA
B. .74mA
C. 1.26mA
D. 2mA

29. $V_R$ = _____ in one second

A. 0
B. .6V
C. 1.8V
D. 6V

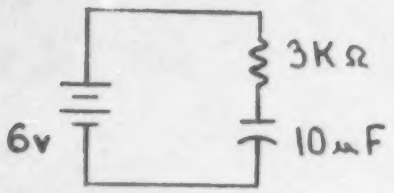


Fig. 7

30. Total capacitance and inductance respectively in Figure 8 is _____.

A. 2 f and 12H
B. 3 f and 16H
C. 9 f and 16H
D. 12 f and 12H

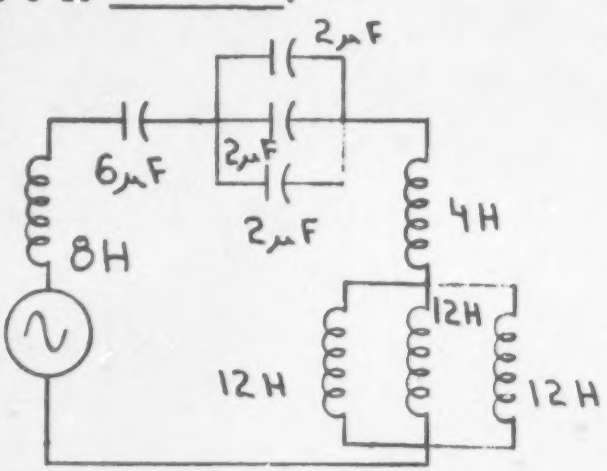

Fig. 8

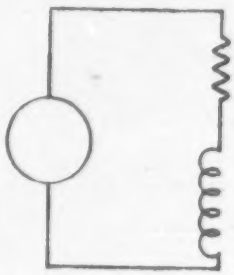
31. Inductance is the property of a circuit to

A. oppose a change in current flow
B. oppose voltage increases
C. retart voltage by 90° (ideally)

32. An increase in frequency will cause a/an _____ in the circuit at right.

A. decrease in inductance
B. increase in inductance
C. decrease in inductive reactance
D. increase in inductive reactance



33. A 40 uF and 10 uF capacitor are in series. Which will drop the greatest voltage?

A. the 40 uF
B. the 10 uF
C. both will drop the same voltage

34. The period of a sinewave is .0056 seconds. The frequency is _____ $H_Z$.

A. 17.8
B. 56
C. 120
D. 178

35. A circuit that would cause a phase shift of +45° would contain

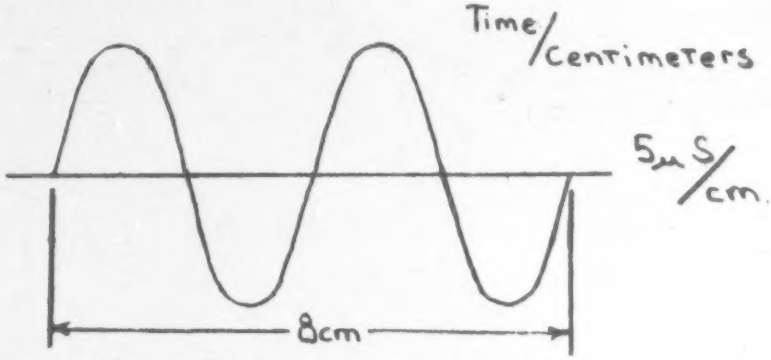
A. R and L
B. R and C
C. L and C
D. all of the above

36. If a VTVM reads 36 Volts RMS the oscilloscope presentation would be _____ volts p-p.

A. 100
B. 36
C. 18
D. 12.5

37. The frequency of the signal displayed at the right is

A. 5KHz
B. 8KHz
C. 25KHz
D. 50KHz



38. Total impedance in Figure #9 is approximately _____ ohms.

A. 10
B. 1K
C. 2K
D. 3K

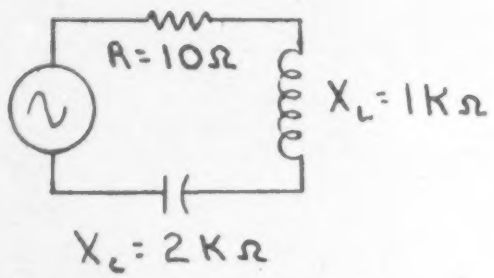


Fig. 9

39. The vector representing $E_c$ is plotted

A. horizontal to the right
B. horizontal to the left
C. vertically up
D. vertically down
E. diagonally to the lower right

40. The angle of lag ( ) in a circuit is the phase shift between

A. R and $X_L$
B. R and $X_c$
C. $E_R$ and $E_L$
D. $E_T$ and $I_T$

41. In Figure #10 at right, the vector for total current ($I_T$) is plotted

A. horizontal to the right
B. vertical up
C. vertical down
D. diagonally to the upper right
E. diagonally to the lower right

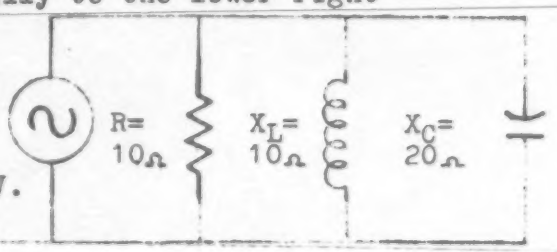

FIGURE #10

42. The principle advantage of a vacuum tube voltmeter (VTVM) over a VOM is its

A. sensitivity
B. portability
C. nearly zero impedance
D. impedance range

43. The oscilloscope presentation of a sine wave would have a voltage indicated in

A. effective
B. average
C. peak
D. peak to peak

44. The oscilloscope function that controls the sweep rate of the beam is the
A. intensity
B. vertical sensitivity
C. stability
D. time/cm

45. To properly view the voltage waveform in Figure 11, the oscilloscope should be:

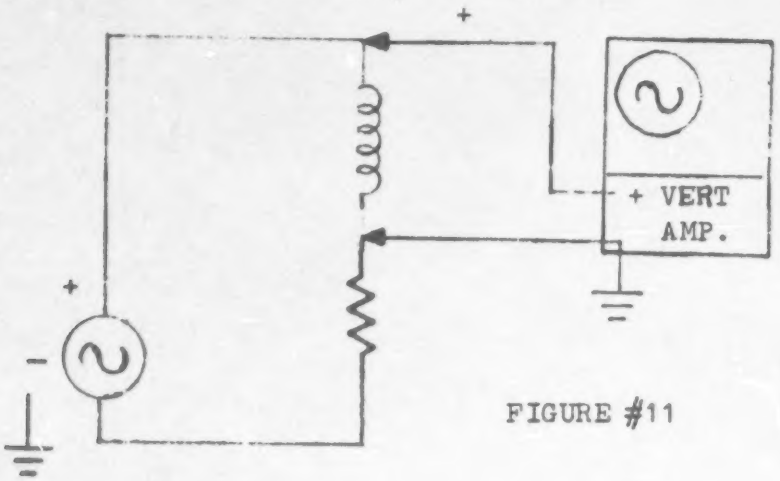

FIGURE #11

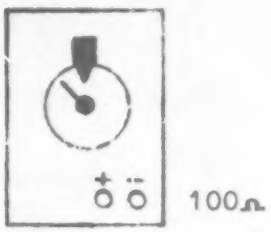
A. warmed up
B. use ground lifting adapter
C. use non-polarized inductor
D. cannot be measured

46. What is the lowest load impedance that could be connected to the AC generator in Figure #12 and still operate within specifications?



OUTPUT Z FIGURE #12

A. 1000
B. 100
C. 50
D. none of the above

47. What is the main reason for checking the VOM and VTVM instruments for zero sdjustment?

A. to check calibration
B. to check to see if internal battery is functional
C. to check to see if internal circuitry is operating
D. to check lead continuity

48. The instantaneous value of voltage from a fundamental generator is _____ when $E_{max}$ = 6V and the cutting angle is 55°.

A. 3.67V
B. 4.9 V
C. 6 V
D. 9.67 V

49. According to Faraday's Law, the magnitude of induced emf and is

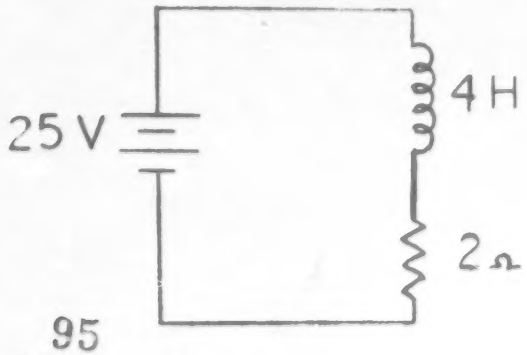
A. directly proportional to rate of current change
B. inversely proportional to the rate of current change
C. directly proportional to induced voltage
D. inversely proportional to magnetic field strength

50. The Q of a coil can be increased by increasing

A. frequency
B. current
C. applied voltage
D. resistance

51. In the circuit at right $V_L$ is _____ in 2 seconds

A. 0V
B. 9.25V
C. 15.75V
D. 25V

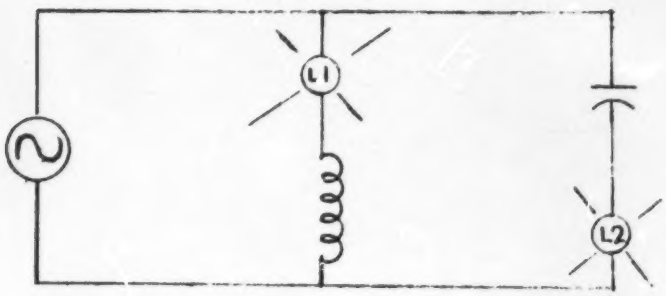


52. $I_L$ at 6 seconds is _____amps.

A. 4.6A
B. 7.3
C. 11.9
D. 16.5

53. As the frequency increases, what happens to the brightness of lamps L1 and L2?

A. L1 increase L2 increases
B. L1 decreases L2 decreases
C. L1 increases L2 decreases
D. L1 decreases L2 increases



54. In a pure inductive circuit Z is plotted

A. Horizontal to the right
B. Vertically up
C. Vertically down
D. Diagonally to upper right
E. Diagonally to lower right

55. Vector $I_C$ is plotted _____ in a parallel circuit

A. Horizontal to the right
B. Vertically up
C. Vertically down
D. Diagonally to upper right
E. Diagonally to the lower right

56. The oscilloscope control that allows accurate voltage measurement is in the

A. Power supply
B. Sweep generator
C. Horizontal amplifier
D. Vertical amplifier

57. The units of reactive power is the _____

A. watt
B. volt-ampere
C. var

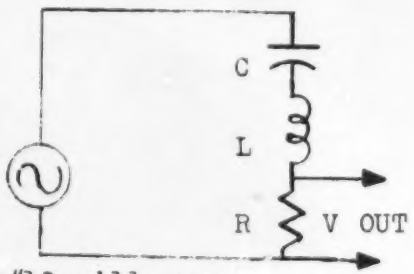
58. In the power triangle, the hypotenuse relates to

A. apparent power
B. true power
C. reactive power

59. The resonant frequency of a series resonant circuit can be increased by

A. increasing L
B. increasing C
C. increasing R
D. none of the above

60. A decrease in R of Figure #13 will cause circuit current to
A. increase
B. decrease
C. remain constant



RESONANT CIRCUIT

FIGURE #13

61. A decrease in R of Figure #13 will cause circuit bandwidth to

A. increase
B. decrease
C. remain constant

62. A decrease in R of Figure #13 will cause the phase angle ( $\theta$ ) to

A. increase
B. decrease
C. remain constant

63. Which of the following is true in <u>both</u> series and parallel resonant circuit?

A. $Z_T$ is minimum at resonance

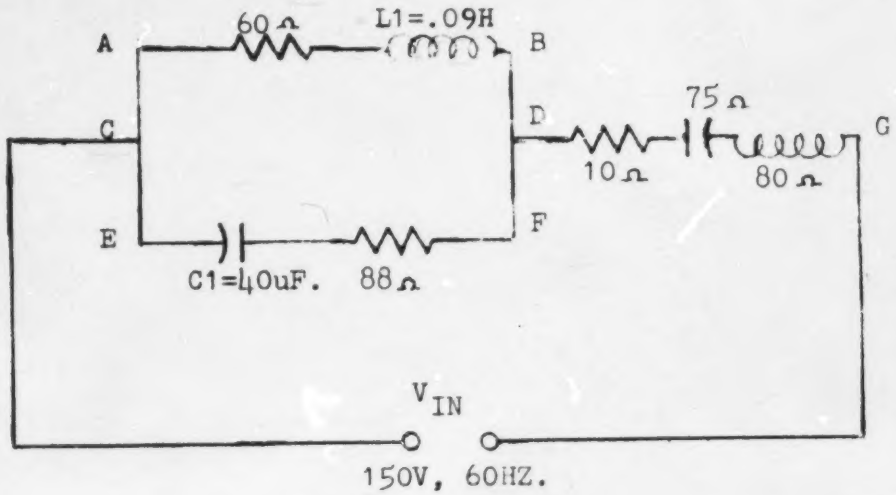
B. $I_{line}$ is a minimum at resonance

C. $\theta$ is large at resonance

D. $X_L$ is equal to $X_C$ at resonance

E. Reactance total maximum at resonance

PART II - Multiple Choice



1. $X_{L_1}$ = _____ ohms

   A. 10
   B. 22
   C. 34
   D. 66

2. $X_{C_1}$ = _____ ohms

   A. 44
   B. 66
   C. 88
   D. 100

3. $Z_{AB}$ = _____ ohms

   A. 34 - j60
   B. 34 + j60
   C. 60 - j34
   D. 60 + j34

4. $Z_{AB}$ = _____ ohms

   A. 34 ∠+29°
   B. 60 ∠+29°
   C. 69 ∠+29°
   D. 69 ∠-29°

5. $Z_{EF}$ = _____ ohms

   A. 88 - j40
   B. 88 - j66
   C. 110 - j88
   D. 110 + j88

6. $Z_{EF}$ = _____ ohms

   A. 110 ∠-37°
   B. 37 ∠-110°
   C. 37 ∠-88°
   D. 88 ∠-37°

7. $Z_{DG}$ = _____ ohms

   A. 10 + j5
   B. 5 + j10
   C. 10 - j5
   D. 5 - j10

8. $Z_{DG}$ = _____ ohms

   A. 5 ∠26.6°
   B. 7.5 ∠26.6°
   C. 9.5 ∠26.6°
   D. 11.2 ∠26.6°

If $Z_{CD} = 50 \angle 4^\circ$

9. $Z_{CD}$ also equals _____ohms

A. 49.6 - j3.7
B. 37 + j49.6
C. 49.6 + j3.7
D. 37 - j49.6

10. $Z_T$ = _____ohms

A. $50.3 \angle 4^\circ$
B. $60.5 \angle 7.6^\circ$
C. $76 \angle 50^\circ$
D. $60.5 \angle -7.6^\circ$

11. Power factor =

A. .01
B. .02
C. .64
D. .99

12. True power = _____watts

A. 2.48W
B. 37.2W
C. 368W
D. 372W

Catonsville Community College
Catonsville, Maryland 21228

Articulation Credit Examination
for ELE-102 Credit

PART I - Multiple Choice. Directions: Place correct letter on answer sheet provided.

1. At series resonance
   a. $X_L = Z$
   b. $X_C = Z$
   c. $R = Z$
   d. none of the above

2. At parallel resonance the line current ($I_t$) is
   a. maximum value
   b. minimum value
   c. 50% of maximum value
   d. .707 of maximum value

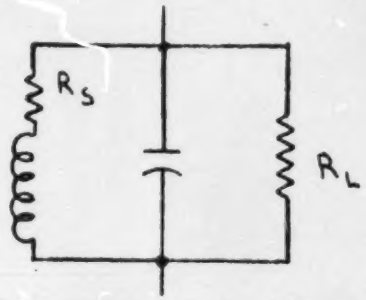
3. An increase in the value of C at series resonance will do what to resonant frequency?
   a. increase $f_r$
   b. decrease $f_r$
   c. no effect on $f_r$

4. An increase in the value of R at series resonance will do what to resonant frequency?
   a. increase $f_r$
   b. decrease $f_r$
   c. no effect on $f_r$

5. Impedance of a series resonant circuit at resonance is:
   a. maximum
   b. minimum
   c. .707 of maximum

6. In Figure 1, increasing $R_L$ causes what effect to circuit bandwidth?

   a. increase
   b. decrease
   c. remains constant



7. In Figure 1, increasing $R_s$ causes what effect to circuit Q?
   a. increase
   b. decrease
   c. remains constant

8. At parallel resonance a tank circuit acts
   a. resistive
   b. capacitive reactive
   c. inductive reactive
   d. all of the above

9. Which of the following is <u>not</u> an application of a transformer?

   a. match impedances
   b. rectify voltages
   c. step up voltage
   d. step down current
   e. act as a coupling device

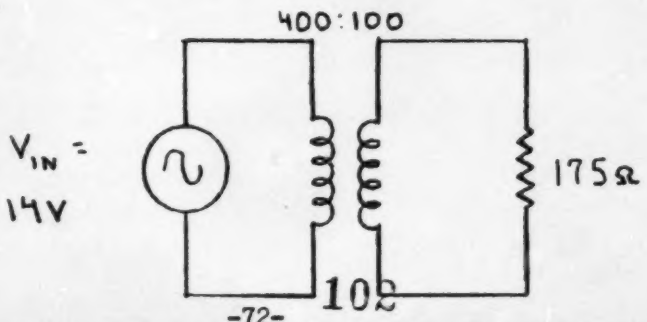
10. The purpose of including an iron core in a transformer is to increase

    a. reluctance
    b. weight
    c. permeability
    d. turns ratio

QUESTIONS 11 through 14 refer to **Figure 2.**

11. Determine secondary voltage. $V_s$ = _____v

    a. 3.5
    b. 7
    c. 14
    d. 56



12. Determine secondary current. $I_s$ = _____mA

a. 14
b. 20
c. 80
d. 320

13. Determine primary current. $I_p$ = _____mA

a. 5
b. 20
c. 80
d. 320

14. Determine primary impedance. $Z_p$ = _____

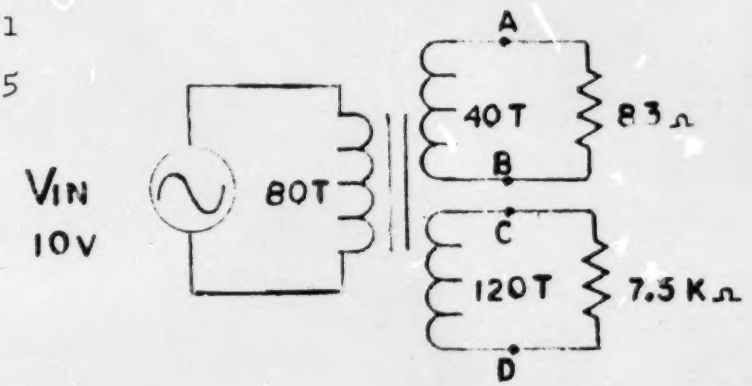
a. 700
b. 2.8K
c. 3.5K
d. 5.6K

15. A step up transformer implies that _____ is stepped up.

a. resistance
b. current
c. voltage
d. power

QUESTIONS 16 THROUGH 18 REFER TO FIGURE 3.

16. The transformer turns ratio for secondary A - B is:
a. 1 to 2
b. 1.5 to 1
c. 2 to 1
d. 1 to 1.5



17. Primary current in the circuit is _____ma.

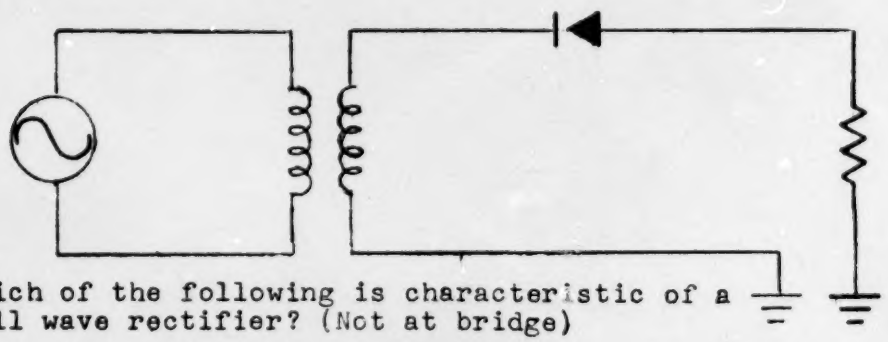
a. 25
b. 33
c. 50
d. 75
e. 750

18. If points "B" and "C" are shorted together, the secondary voltage from points "A" to "D" would be _____.

a. 5
b. 10
c. 15
d. 20
e. none of the above

19. The rectifier in Figure 4 gives an output that is _____ with respect to ground.

a. positive
b. negative
c. zero



20. Which of the following is characteristic of a full wave rectifier? (Not at bridge)

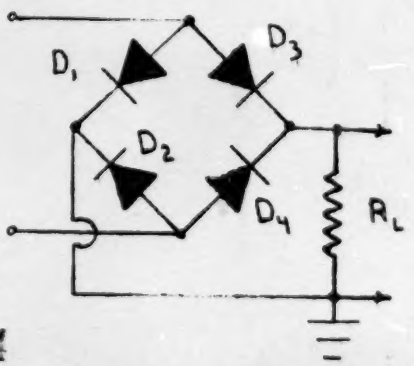
a. 120 HZ input frequency
b. 4 diode rectifiers
c. negative output voltage
d. tapped secondary transformer

21. What advantage does a bridge rectifier offer over a conventional full wave?

a. (+) or (-) output
b. no transformer
c. 2 diodes
d. low ripple frequency

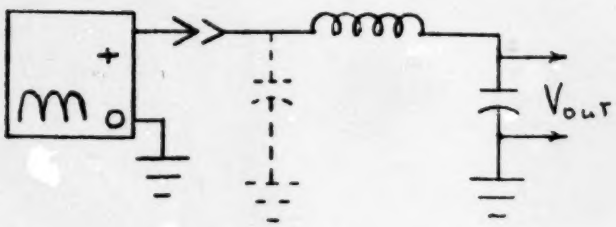
22. Which two diodes must be revised in Figure 5 in order to obtain the correct positive output voltage?

a. D1 and D2
b. D1 and D3
c. D2 and D3
d. D2 and D4

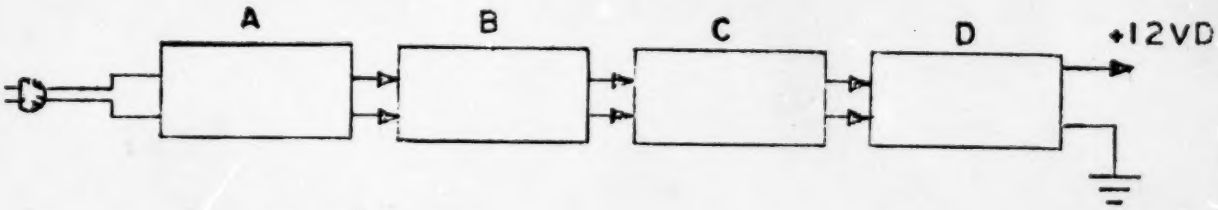


23. In Figure 6, the addition of a 10 ufd capacitor from point "x" to ground will have what effect on Vout?

a. no effect
b. vout will fall to zero
c. vout will increase slightly
d. vout will decrease slightly

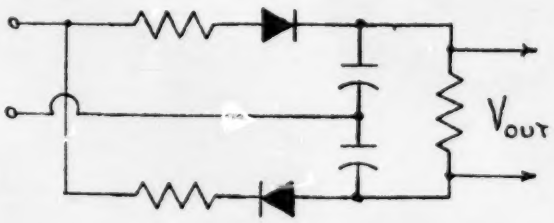


24. A good low voltage power supply has 4 major components/circuits. They are: (4 points)



25. The voltage doubler of Figure 7 is a _____doubler.

a. full wave
b. half wave
c. it is not a doubler

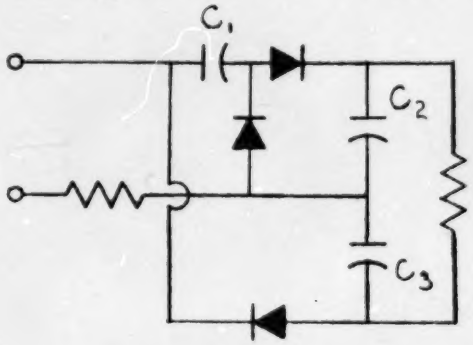


26. Vout of a voltage doubler is approximately equal to _____.

a. 2 · Vavg
b. 2 · Vrms
c. 2 · Vpk
d. 2 · Vpk - Vpk

27. The circuit in Figure 8 has what approximate voltage on C2?

a. Vin
b. 2 Vin
c. 3 Vin



Questions 28 through 35 refer to Figure 9.

28. The circuit is a _____ regulator.

a. series
b. shunt
c. impedance
d. current

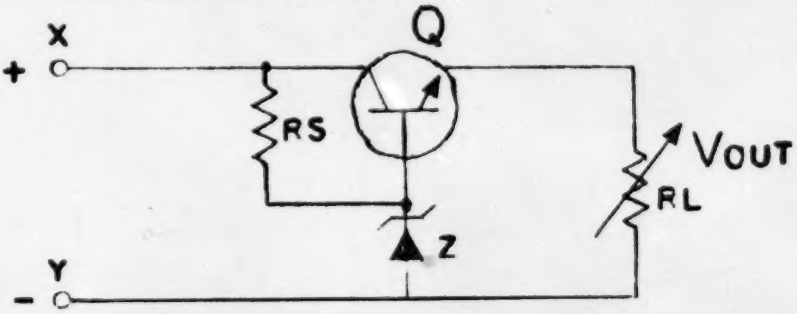


FIG. 9

29. During normal operation
a. point X = negative, Y = positive
b. point X = positive, Y = negative
c. either a or b

30. Which component is referred to as the pass element?

a. Q
b. R
c. $R_L$
d. Z

31. Which is true about Vout?

a. $V_{in}$ .
b. $V_{in} - V_Z + V_{BE}$
c. $V_{CE} - V_Z$
d. $V_Z - V_{RL}$

32. Which of the following is true about Figure 9?

a. $I_{RS} = I_C + I_B$

b. $I_B = I_Z + I_{RL}$

c. $I_B = I_{RS} - I_g$

d. $I_{in} = I_E + I_{RL}$

33. Which is true about Figure 9? It provides

a. a constant voltage for a varying current
b. a constant current for a varying voltage
c. zener current equals load current
d. constant load power at the load

34. Which function is <u>not</u> performed by Figure 9?

a. it reduces ripple voltage
b. it eliminates the need for a rectifier
c. allows for load variations
d. allows input voltage variations

35. In Figure 9 (if B = 90, Ig = 8mA, $I_{R_S}$ = 9mA) $I_{R_L}$=_____mA.

a. 0.5
b. 90
c. 107
d. 180

36. Which circuit in Figure 10 is referred to as collector feedback biasing?

37. Which circuit in Figure 10 is called base current biasing?

38. In Figure 10, across which resistor would an emitter bypass capacitor be used?

a. $R_2$

b. $R_5$

c. $R_9$

d. $R_{11}$

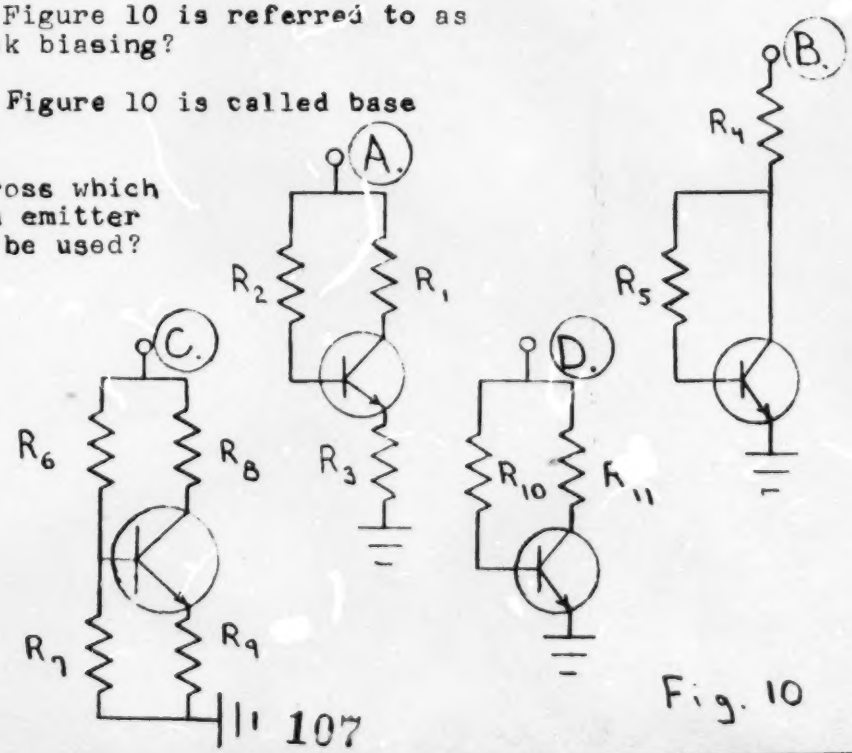

Fig. 10

39. In Figure 10, which resistor could be completely removed without eliminating collector current? (opened)

a. $R_3$

b. $R_5$

c. $R_7$

d. $R_{10}$

40. Which circuit in Figure 10 is not employing feedback for stability?

41. When feedback is used for stability in an amplifier, it is called

a. regenerative
b. negative
c. positive
d. repulsive

42. Which is correct about TGIR? Av _____

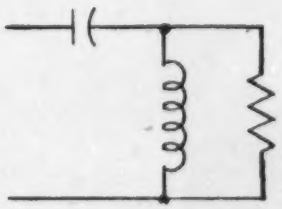
a. $\frac{R_{out}}{Z_{out}}$

b. $\frac{R_{in}}{Z_{in}}$

c. $\frac{R_{in}}{R_{out}}$

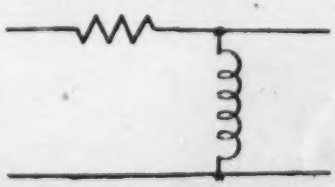
d. $\frac{Z_{out}}{Z_{in}}$

43. The Filter in Figure 11 is a
a. type high pass
b. type low pass
c. L type high pass
d. L type low pass



44. The filter in Figure 12 is a

a. high pass
b. low pass
c. band pass
d. band stop

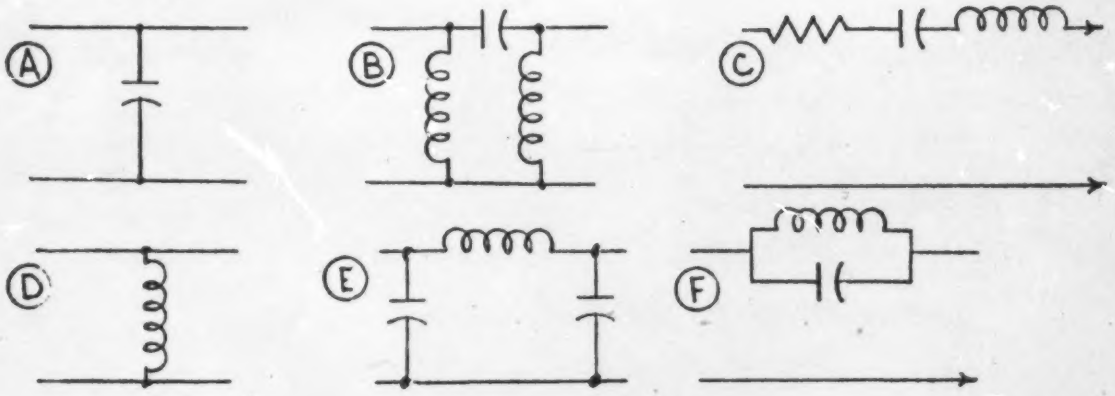


Matching Questions 45 through 47.

45. Low pass type filter

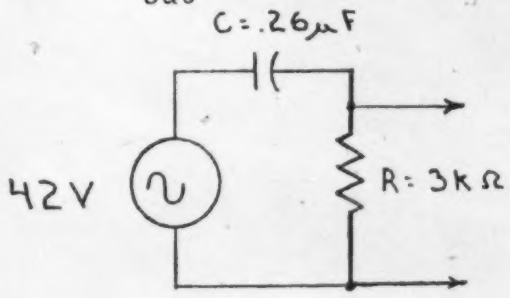
46. Band stop filter

47. High pass filter



48. If the cutoff frequency of Figure 13 is 227 $H_Z$, what is $V_{out}$?

a. 6.3 V
b. 29.4 V
c. 54.6 V
d. 132 V



Use the low voltage power supply(Figure 14) for questions 49 through 55.

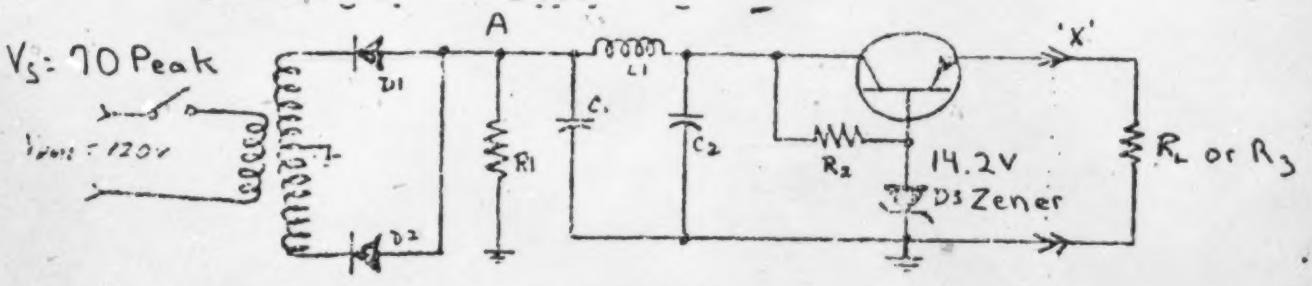


Fig. 14

49. The voltage at point A with respect to ground is
a. positive DC
b. negative DC
c. AC

50. The voltage at point A would be approximately
    a. +17, -17 (AC)
    b. +34, -34 (AC)
    c. 21.5
    d. 34

51. C1, L1, C2 comprises a _____filter.

    a. high pass
    b. low pass
    c. band pass
    d. band reject

52. The purpose of R1 is to

    a. limit load current
    b. serve as a voltage regulator
    c. drain capacitor charge when S1 is open
    d. protect Q1.

53. D1, D2 are acting as a _____rectifier.

    a. full wave
    b. half wave
    c. quarter wave
    d. bridge

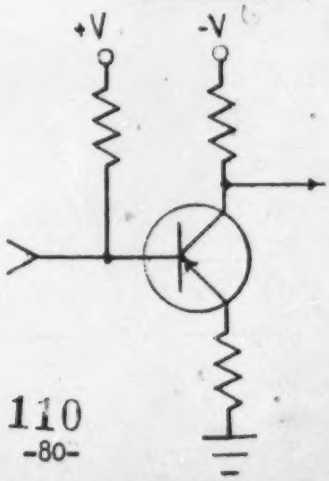
54. $V_{out}$ (point X) is _____volts.

    a. +14.9
    b. -14.9
    c. +13.5
    d. -13.5

55. Inductor L1 could be replaced with a resistor with minimal output voltage change.

    a. true
    b. false

56. The circuit in Figure 15 is a _____amplifier.
    a. common emitter
    b. common base
    c. common collector



57. Which amplifier configuration does <u>not</u> have a current gain 1 ?

a. common emitter
b. common base
c. common collector

58. Which amplifier configuration has a $180^{\circ}$ phase shift?

a. common emitter
b. common base
c. common collector

59. The lowest output impedance is obtained with a

a. common emitter
b. common base
c. common collector

60. Which of the following is the correct Shockley approximation?

a. $A \approx \frac{R_L}{R_i}$

b. $R_{in} \approx \frac{V_{in}}{i_{in}}$

c. $I_E \approx \frac{h_{1b}(.026)}{I_B}$

d. $h_{1b} \approx \frac{.026}{I_E}$

61. The voltage at which drain current stabilizes ( $I_D = 0$) is the

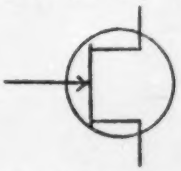
a. pinch off voltage
b. cutoff voltage
c. threshold voltage
d. breakdown voltage

62. Which is true about p-channel JFET biasing?

a. gate negative, drain positive
b. gate positive, drain positive
c. gate positive, drain negative
d. gate positive, drawin negative

63. The JFET depletion region contains
    a. majority carriers only
    b. minority carriers only
    c. both majority and minority carriers
    d. N type impurities

64. The schematic symbol in Figure 16 is representing a/an
    a. Unijunction transistor
    b. P channel JFET
    c. N channel JFET
    d. MOSFET



Questions 65 through 76 pertain to the circuits in Figure 17.

DIRECTIONS: ANSWER "T" FOR TRUE, "F" FOR FALSE.

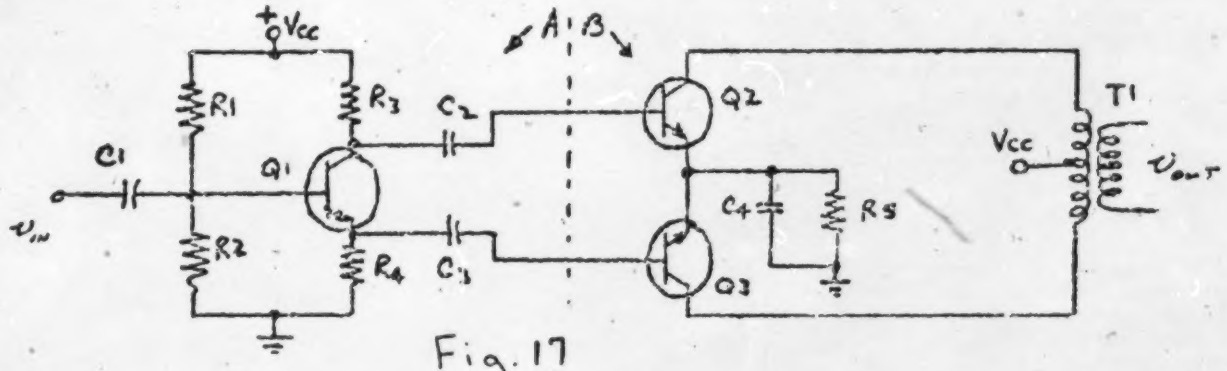


Fig. 17

____ 65. Circuit A is a RF power amplifier.

____ 66. Circuit B is a push pull power amplifier.

____ 67. Circuit A could be replaced by a tapped secondary transformer.

____ 68. The inputs to $Q_2$ and $Q_3$ must be identical in phase and amplitude.

____ 69. This circuit configuration ususally provides high distortion.

____ 70. $T_1$ usually feeds a crystal oscillator.

____ 71. The circuit will function without $C_4$.

____ 72. $Q_1$ should be a PNP transistor.

____ 73. The input to $Q_1$ could be from a phase shift oscillator.

____ 74. The collector supply for $Q_2$ and $Q_3$ must be (+).

____ 75. An increase in the value of $C_1$ will improve LF response.

____ 76. $Q_3$ is in backwards(collector and emitter reversed).

Questions 77 through 82 contains oscillator types. Match the name of each oscillator with the brief description.

| | | | |
|---|---|---|---|
| _____ | 77. | two tapped capacitors | a. Armstrong |
| _____ | 78. | three RC networks | b. Phase shift |
| _____ | 79. | "tickler" coil | c. Colpitts |
| _____ | 80. | piezoelectric effect | d. Electron coupled |
| _____ | 81. | one tapped coil | e. Hartley |
| _____ | 82. | series tank capacitor | f. Ultra-Audion |
| | | | g. Clapp |
| | | | h. Crystal |
| | | | i. Wein bridge |

83. A frequency multiplier is operated Class _____.

a. A
b. B
c. C
d. AB

84. A device that converts DC energy to AC energy is called a/an
a. crystal
b. motor
c. amplifier
d. oscillator

85. Oscillator instability is often caused by

a. buffer amplifiers
b. load variations
c. ambient temperature
d. humidity

86. The natural resonant frequency of a quartz crystal is dependent on
a. circuit voltage
b. circuit current
c. physical dimensions
d. amount of feedback

87. Crystal oscillators usually require an oven to
a. maintain a constant temperature
b. boil out moisture
c. maintain a constant capacitance
d. provide a constant voltage

88. The selectivity of a receiver is its ability to
a. reject audio frequencies
b. distinguish between adjacent channels
c. pass only audio frequencies
d. amplify weak signals

89. In amplitude modulation, as the intelligence frequency is increased the modulation percentage will
a. increase
b. decrease
c. remain constant
d. vary constantly

90. In amplitude modulation, as the amplitude of the intelligence is increased, the mod. percentage will

a. increase
b. decrease
c. remain constant
d. have no effect

91. If the modulation factor is .83, the percentage of modulation is

a. 17%
b. 83%
c. .17%
d. .83%

92. The signal that is modulated is called the _____ frequency.
a. local oscillator
b. intelligence
c. carrier
d. difference

93. An FM carrier is recognizable by its
a. constant amplitude
b. constant frequencey
c. varying amplitude

UNIVERSITY OF CALIF.
LOS ANGELES
AUG 25 1978
CLEARINGHOUSE FOR
JUNIOR COLLEGES

DIRECTIONS: Answer "T" for true, "F" for false for Questions 94 through 103
Refer to Figure 18.

AM Transmitter

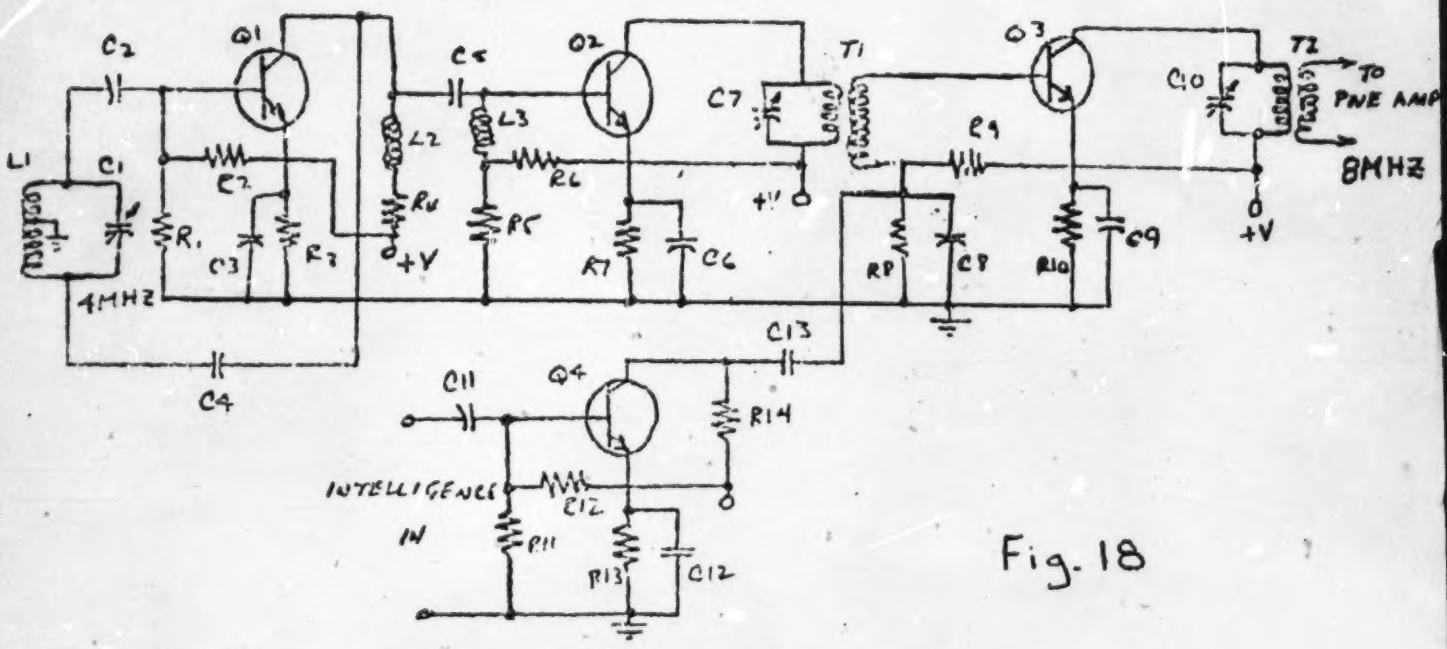

Fig. 18

94. The circuit containing Q1 is a pierce oscillator.

95. Circuit containing Q2 is a buffer amplifier.

96. The circuit containing Q3 is an audio amplifier.

97. The circuit containing Q4 is a single ended power amplifier.

98. The tank circuit containing C10-T2 is tuned to C1-L1's.

99. Ideally the $X_L$ for L2 is zero ohms.

100. Ideally the $X_C$ of C11 is zero ohms.

101. C9 is a coupling capacitor.

102. C6 shorts, the output frequency will drop to 4MHZ.

103. C5 increases in value, the output remains at 8MHZ.
